TIMBER-EFFECT STEEL DOORS

PRODUCT OVERVIEW

Robust UK steel doorsets provide a high-performance, long-lasting alternative to timber, with proven benefits in durability, safety and security.

APPLICATIONS

Our steel doorsets are ideal for high traffic and harsh environments in both internal and external settings.

Our product versatility and design flexibility means our doors are suitable for use in a wide variety of applications including schools, hospitals, offices, public buildings, retail environments and a host of other commercial and industrial settings.

KEY BENEFITS

Durability

- Steel doors do not warp, split or rot.
- They do not require painting, sealing or refinishing.
- They provide enhanced resistance to knocks, vandalism and wear.
- Steel doors also provide increased weather resistance.

Enhanced Security

- Steel doors are compatible with a wider range of hardware and locking systems (such as multi-point locking and access control integration) as locking reinforcements are not limited by the core material strength.

Superior Anti-Corrosion Qualities

Particularly when manufactured using Magnelis® steel:

- Magnelis® is an exceptional metallic coating which provides unrivalled corrosion protection.
- It is proven to perform three times better than galvanised steel and outperforms other coatings containing less aluminium and magnesium.
- It is also a more cost-effective alternative to post-galvanised steels.
- Magnelis® has a self-healing effect thanks to its unique composition that provides an unprecedented level of surface and cut-edge protection.

Sustainability

Steel is 100% recyclable, often includes recycled content, and has a longer lifecycle.

Cost-Effective

Steel doors provide a reduced lifecycle cost.

Specifications

We can manufacture single, double and leaf-and-a-half doorsets, with overpanels and side panels for particularly large openings. Product dimensions and specifications will be dependent on your requirements and the product range selected.

Timber-effect doors are available in the following ranges:

- INNA-DOR
- SECUR-DOR 2.1
- OUTA-DOR
- TUFF-DOR 2.1

Security doors are tested to LPS1175 or PAS24 security standards (certain product specifications), with reinforced cores, security rated locking systems and anti-jemmy astragals.

Robust steel doors are available with up to 10 years anti-corrosion warranty when manufactured from Magnelis® steel.
